

## Use as follows:

1. The second page of the PDF is the cover.
2. Fold it so that the "Airport Frequencies / Information" section is on the front cover.
3. Clip into kneeboard as shown. The clip should go near the "notes" section. Notice how the two pages that are designed to be written on in flight are on the hard kneeboard surface.
4. To access the weather (which you presumably got preflight), "open the book"
5. To access other pre-flight stuff, such as your flight plan form, flip up from the bottom.
